

# Tabletop Exercise Network Attack Simulator

## Prove Your Threat Response Team Can Respond

Your network response team says they can detect, respond, and neutralize a cyber breach during your tabletop exercise. Now they can PROVE IT!

---

### Here is how it works:

1. **Simulates** the cyber-attack on your production network during the exercise.
2. **Visualizes** all detection and alerting blind spots that would compromise your response capability.
3. **Improves** your network defense teams capabilities by allowing them to practice and get better.

#### Remediation Included:

If detection & alerting blind spots are identified, we provide recommendations with ability to re-run the simulation to prove successful remediation.
